CAST STEEL GRIT

About:

Steel Grit / Cast-steel, grit, is a metallic blast- cleaning abrasive, the manufacture of which takes place following the most stringent criteria and controls. Steel Grit is characterized by its angular shape resulting in deeper anchor blast patterns in aggressive blast applications, while also offering recyclability.

Typical Applications:

Common steel grit applications include pipe coating, epoxy coating prep, structural steel, and bridge blasting. The particle size range is to be specified by the user, depending on the particular blast-cleaning purpose and the condition of the surface to be blast-cleaned. The selection of the particle size depends among other things on the individual blast-cleaning purpose as well as the desired surface condition.
