

# YOUR BLAST MEDIA WAREHOUSE

## KLEEN BLAST ABRASIVE

### About:

**Kleen Blast Abrasive** is a sand blasting media that is black in color, with angular to sub-angular granules. Kleen Blast is Iron Alumina Silicate that has been water-quenched, to remove most of the soluble metals and harden the particles at the cooling stage. The material is fresh water washed, removing unusable fines, dust and soluble chlorides. The result is a product which is inert, amorphous, worker-safe blast media with zero free silica. Testing shows all RCRA 8 Metals + 17 California metals are either undetectable or way below regulatory levels.

**QPL Approved (MIL-A-22262B), C.A.R.B. Approved for Outdoor Blasting, and SSPC AB-1 Certified.**

### Typical Applications:

**Kleen Blast Abrasive** is most often specified for Navy and civilian shipyards, Departments of Transportation and municipalities. For ships, bridges, refineries, auto shops and finishers, Kleen Blast is the abrasive most blasting and coating contractors select as their abrasive of choice.
