

Cleaning with Glass Beads

POTTERS IS A WORLD LEADER, WITH OVER 100 YEARS OF EXPERIENCE IN MANUFACTURING GLASS BEADS.

Definition

■ Cleaning is the process of removing soils from a surface to prepare it for subsequent work.

Benefits

- No measurable amount of metal removed
- No contamination of work surfaces
- Easy cleaning of hard-to-reach fillets
- No disposal costs

Questions to Ask

- What surfaces are you cleaning?
- What material are removing?
- What issues are you experiencing?
- What type of equipment are you using?

Example Answers

- i.e. base metal, finished surface, etc.
- i.e. rust on top of cast iron, thick paint on top of wood, organic matter on top of steel, grease on cast aluminum
- i.e. finish too rough, cleaning too slow
- i.e. suction cabinet, 2 hoses or direct pressure, 1 hose

Other Considerations

- Time to finish a specific surface area?
- What is the blasting distance and angle?
- What are your pressure limitations?

↑ COARSER
Remove larger soils, Cleans slower,
less impacts per pound

AAA	Removal of oxides, slag flux and weld discoloration
AA	Remove grease and paint, and prevent stress corrosion
AB	Surface preparation for painting, plating, and welding
AC	Welding oxides, and automotive parts
AD	Remove epoxy, blending minor defects
AE	Electrical connections, hydraulic parts
AG	Produce glare-free surfaces
AH	Cleaning tool dies

↓ FINER
Remove finer soils, Cleans faster,
more impacts per pound

POTTERS ENVIRONMENTAL COMMITMENT

Potters respects the environment by the recycling of over one billion pounds of glass each year. Potters works closely with regulatory agencies and responsible customers around the world to ensure that we provide glass beads that don't harm employees, contaminate water supplies or land around roadways. We have set our own strict standards and voluntarily perform XRF analysis and other quality control procedures on incoming raw materials to ensure our glass beads are safe and meet heavy metals limitations.
